

DAXDA V11.4 Hostinger Deployment Guide

This document details how to deploy DAXDA V11.4 Clifford Algebra $Cl(4,1)$ AI & Web Gateway on Hostinger Web Hosting (hPanel Python App / Passenger WSGI) or Hostinger VPS.

1. Package Components

- `passenger_wsgi.py` & `.htaccess`: Hostinger hPanel Phusion Passenger WSGI entry points.
- `app.py`: Interactive Glassmorphism Web UI Dashboard & REST API backend.
- Core Engine Modules: `daxda_engine_aglm_opt.py`, `daxda_engine_v11_4.py`, `cl41_fast.py`, `clifford_algebra.py`, etc.
- `requirements.txt`: Lightweight Python requirements (Flask, gunicorn, fpdf2).
- `install_hostinger.sh`: Shell script for SSH / Terminal auto-setup.

2. Hostinger hPanel Installation Steps (Recommended)

1. Upload `daxda_v11.4_hostinger_deployment.zip` to `public_html/` using Hostinger File Manager.
2. Extract all contents in `public_html/`.
3. Open Hostinger hPanel -> Search "Setup Python App".
4. Click Create Application. Set Python version (3.9+), Application Root to `public_html`, and Application Startup File to `passenger_wsgi.py`.
5. Click Create, then under Configuration File type `requirements.txt` and click Run Pip Install.
6. Click Restart Application and navigate to your website URL!

3. REST API Quick Reference

POST `/api/evaluate` - Evaluate prompt through $Cl(4,1)$ Geometric Engine:

```
{
  "input_text": "Verify quantum safety protocol",
  "engine": "AGLM-OPT"
}
```

GET `/api/preflight` - Execute preflight suite & return results.

GET `/api/health` - Check service availability.

4. Troubleshooting

- 500 Error: Check permissions of `passenger_wsgi.py` (644/755) and review hPanel Error Logs.
- Missing Flask module: Ensure Run Pip Install was executed for `requirements.txt` in hPanel.
